

# White paper

# Introduction

Our journey was to answer a straightforward question.

How would the parcel delivery business change if people could deliver packages to each other in a secure, efficient way?

The Inzagy ecosystem aims to answer this question by:

- creating a marketplace for travelers and senders to interact and complete transactions
- a robust, reliable community built around honesty, transparency, and trust
- an authentic review and rating system to keep one another accountable
- creating a centralized & decentralized (future) token system to ensure security, lower costs than any company currently offers
- incentivized system to encourage the holding of the Inzagy (NYZ) token, with rewards and lower transaction costs on the smart-chain network

Who is our target audience?

Everyone! Because we want everyone to be able to receive packages faster and affordably.

Who is our competition, and what is the Inzagy advantage?

Our competitors are local mail services and those around the globe like FedEx, DHL, USPS, and others. Inzagy platform and marketplace will have speed and price advantage.

Why is Inzagy different?

Lower costs and faster service. Seamless and easy-to-use marketplace. Supportive staff and a reliable community. Token holders will benefit immensely. Let's summarize.

Key things we want to do:

- lower the cost of package sending by making a user-driving marketplace
- speed up delivery of packages by providing marketplace senders and commuters/travelers a place to see, post, and accept requests for parcel delivery
- have a simple payment system with our token while allowing flexibility of other payment options
- create an app for IOS and Android for easy access to the system and on-the-go tracking for senders and receivers
- create a wallet for easy transaction and low fees using the Binance smart-chain network

We want to keep this roadmap a secret known only to those who read our whitepaper, our faithful believers. We want to maintain a competitive advantage as we release our road map targets and boosting the token price.

## Our background

We are travelers who believe that it shouldn't be costly to send a care package to a loved one in a speedy and efficient way with a human touch.

We have experienced the struggle of buying a loved one souvenir or a Nutri-Bullet blender for \$50 just to find out that the cost to send it to the loved one you bought it for is well over \$100. We think this is unacceptable.

So, we thought, what if, we knew someone going to where our loved one lives and we could send the package with them (given they have space) and spend \$10 doing so? Wouldn't it be great if there was a platform where people post their trips, and people who want to send a package to a loved one or a friend can contact them and agree on doing just that? It would be efficient, cost effective and fast.

That is what the Inzagy marketplace aims to accomplish.

## The Token in Detail

- The token will be the currency of the marketplace.
- Users will be able to buy and hold the token.
- Users will be able to use the token to pay for services on the marketplace.
- The token will be available on exchanges for trading as well (TBA).

- We anticipate the token will increase in value with time, increasing the investment of those who buy it early.
- The token is now available on Pancakeswap for purchase. It will be available for direct purchase with fiat on our website.

The contract address to find and purchase (NYZ) token is:

0x6c82311bd8c59418ba30abe6385f40a54ff82cf1

How would the funds from the token sale be used?

52% will go into product development.

- Marketplace development
- Easy transfer app – the app will allow users to do two things:
  1. store their Inzagy (NYZ) tokens, move them to exchanges if they so choose to exchange them into other currencies or fiat
  2. Allow users to send and receive fiat and crypto fast, easier, and lower fees than Paypal. Included function – international money sending, which will be made seamlessly and in minutes.

22% will go into user growth, marketing, and branding

1. Marketing events & Research
2. User growth on the platform
3. Branding

15% to partners, developers and advisors

1. 5% to developers
2. 5% to partners
3. 5% to advisors

5% to airdrops, bounty, early investors, promotions, and engagement

10% owners

## Why BNB Network?

When comparing the networks, we found that ETH transaction fees are out of control. Our users and token holders would not benefit from the network because the fees would eat a chunk of their earnings on token transactions.

We pledge to hold our token for at least two years so that our project can grow. With that growth, we expect the token to increase in value. Thus, we wanted a secure, reliable network with low transaction fees for your users.

However, we have plans to release an ERC-20 token with the same value (at the time of release) as the current token on the BNB network. We will wait until ETH 2.0 is released and if we see that there is value in it for our users. Our wallet will be updated to handle such transitions when that happens. We want a genuinely decentralized system on the

Ether network, but we do not want to slap our users with high transaction fees as it is now. So, for now, the BNB network is the best option.

## The vision for our app?

There are apps out there; why create our own? Because a lot of the apps are not as easy to use for new users in the crypto space. Not only that, they are not truly effective in doing what we want to accomplish.

We want to create an app that genuinely serves the community and those who use it. We want it to be used as a gateway between the Inzagy marketplace and users' bank accounts. Not only that, we want it to be used to send money locally and internationally without outrageous wire fees.

That is, users can send tokens and fiat to the app locally and internationally with low transaction fees.

## What are future developments?

In the future, we want the app also to swap crypto into fiat and vice versa. That will be done using market rates right inside the app to make transactions even faster and seamless. The Inzagy token would be used as the gas fee for those transactions.

The best is yet to come!! Stay with us and HOLD.  
The contract address to find and purchase (NYZ) token is:

0x6c82311bd8c59418ba30abe6385f40a54ff82cf1

HOLDERS will receive special prices and benefits. Follow us on twitter for announcements #IAMINZAGY

## Conclusion

The Inzagy marketplace will be one of a kind for parcel sending and receiving. With user-generated trips, like Airbnb, we will change the way sending and receiving packages works.

We believe the world is slowly transitioning into a sharing economy such as Uber, Airbnb, Couchsurfing, and others. Yet, there is no platform to rival the ever-expensive parcel business. We want to place that trust back into the hands of the people with an easy-to-use marketplace that holds each other accountable via reviews, ratings, and so much more. And the best part is that it will be backed by blockchain technology for a secure and trusted network.

Our app will bring about a much-needed solution to the high transaction fees for sending and receiving money and crypto. We can't give away too many details concerning the app but stay tune as our road map leads us to it. The Inzagy marketplace is the beginning of a new era in parcel and

money sending. It will be the first community-centered marketplace that will bring about a solution to a problem that affects billions of people worldwide.

Many thanks to our HOLDERS and early investors such as yourself. Great things are coming. Stay with us and be a part of it all. Thank you

From yours truly,  
Tate & the Inzagy team
